

Digital Wireless

Guitar Plug

We are searching for interested OEM clients NOW!

Solutions starting at \$48 OEM cost for a digital wireless transmitter + receiver set.

Highly customized Bluetooth firmware and chipset solution. Complete hardware solutions or licensing available.

Built in digital signal processing effects and filters available.

NOW is the time to become the market leader at the beginning of a new era of digital wireless audio systems for musicians. We desire long term relationships for year over year product improvements and extension products in the digital wireless audio field.

We have recently developed a number of breakthrough technologies that make our patent pending guitar plug technology a compelling platform for OEM companies to offer an extremely low cost, but high performance digital wireless audio system.

We envision this digital wireless guitar plug to be a great addition to a complete line of wireless audio system products.
