We are searching for interested OEM clients NOW!

Solutions starting at \$48 OEM cost for a digital wireless transmitter + receiver set.

Our Mini Mic custom digital wireless audio system is far superior to standard Bluetooth systems, but leverages the low cost, high availability chip sets. Highly customized Bluetooth firmware and chipset solution. Complete hardware solutions or licensing available.

Digital signal processing effects, noise filters, and voice activation features available. Wireless receivers can be 1/4 in, 1/8 in, XLR, or even USB connectors.

NOW is the time to become the market leader at the beginning of a new era of digital wireless audio systems for microphones. We desire long term relationships for year over year product improvements and extension products in the digital wireless audio field.

We have recently developed a number of breakthrough technologies that make our patent pending Mini Mic technology a compelling platform for OEM companies to offer an extremely low cost, but high performance digital wireless audio system.

About KC Wirefree

Founded in 2003, KC Wirefree is an industrial Bluetooth module subsystem manufacturer and firmware development company. Our modules are pre-engineered, fully licensed subsystems, ready to deploy into OEM products. We specialize in custom firmware development for both audio and data applications.

Features:

- Actual size 7mm chip solution
- Ultra low cost
- 16-bit digital sampling up to 44kHz
- Low latency 20-40ms digital delay
- Up to 600 foot range
- USB receiver option
- High reliability data redundancy options
- Worldwide 2.4GHz frequency
- Built in Li-Ion battery recharging
- Patent pending system technology
